

Ideas for reuse of paper

- Write on the back page (Notes, reminder)

- Print on the back page
- Do handicraft/origami with the paper

- Use f.ex. newspaper as packing material
- Use it as compost in the garden
- Use it as a drop cloth when painting
- Use « duplex » when printing for paper reduction

Projects in Hemne for recycling/reuse

Nearby the HAMOS station in Hemne you can find a “reuse cabin”. Inside there you can put old stuff that you don’t need any longer and/or take out something you think is useful, without paying!

In our school you can find in every room recycling boxes. When you throw old paper inside there, it will be used for the production of new paper.

There are also several environment saving projects in Hemne such as Beach cleaning campaign, a price for environmental work or an app that helps you with throwing away garbage.

Recycling Of paper

Why should we recycle?

Recycling in Norway and Hemne

Ideas for reuse

Projects in Hemne for recycling/reuse

Why should we recycle?

- Save money
 - No need to buy new paper (if you **reuse** old paper)
- Environment
 - **Cutting** down forests
 - **Destroying** the «lungs of the earth» (less converting of CO₂ to O₂)
 - **Devastating**
 - **Increasing** CO₂-emission in transport

When we tear down forests we are literally taking away large chunks of the earth's precious organs, such as the heart and lungs. By destroying these precious components we are killing innocent animals, devastating local communities, and creating our own final destruction.

Recycling in Norway

1. **Sorting** of paper, plastic, food (residual waste)
2. **Pressing** the waste to cubes (for transport)
3. **Cutting** of the paper in small pieces
4. **Mixing** with water
5. Evtually addition of **colour**
6. **Pressing** of new paper/cardboard

Recycling is an industry in constant change with a wide range of materials and relentless conditions. To make progress, you need both performance and precision. The recycling process often takes place in stations in foreign countries. There are some stations in Norway, one example you can see on the picture above.

Recycling in Hemne

- Several **recycling-points** help people outside of cities with waste disposal.
- **Sorting** of garbage at the stations in paper, plastic, metal, glass, wood, electronic and general waste.
- Otherwise: trucks pick up the garbage **in front of the houses**. Paper and plastic once a month and general waste every other week.
- Some people burn paper in the **fireplace** or have **compost** for botanical waste.

In Norway the garbage companies for the different regions are always private concerns. The company in Hemne is named HAMOS, that stands for the different regions where that company is responsible for. HAMOS – Hemne, Agdenes, Meldal, Orkdal and Skaun.
